

Regenesis is an innovative invention for capturing and returning the energy generated by exhaust fans.

As an inventor, I needed help in determining the best strategic direction to commercialize the Regenesis technology and to raise funds beyond friends, family and angel investors.

DOMINION has been invaluable in providing the experience and support in building a roadmap for both that made perfect sense. Their communication is excellent and their insights into areas like financing options and overall strategy have been irreplaceable.

Very best,

Perry Martens
Founder & CEO
